It is divided into two parts, which can be used as different textbooks, one for an advanced undergraduate course in functions of one variable and one for a graduate course on Sobolev functions. The first part develops the theory of monotone, absolutely continuous, and bounded variation functions of one variable and their relationship with Lebesgue – Stieltjes measures and Sobolev functions.

A FIRST COURSE IN SOBOLEV SPACES GIOVANNI LEONI PDF

In mathematics, a Sobolev space is a vector space of functions equipped with a norm that is a combination of L_p -norms of the function together with its derivatives up to a given order. The derivatives are understood in a suitable weak sense to make the space complete, i.e. a Banach space. Intuitively, a Sobolev space is a space of functions possessing sufficiently many derivatives for some application domain, such as partial differential equations, and equipped with a norm that measures both the
