Approach can be directly translated into the semantics of the application. In this paper, we extend this model with a lattice-based representation for the context knowledge. We believe that the lattice representation is more natural for representing the context knowledge and for cross comparison.

options, a typical example would be pricing an American option, where a decision as to option exercise is required at "all" times (any time) before and including maturity. A continuous model, on the other hand, such as Black-Scholes, would only allow for the valuation of European options, where exercise is on the option's maturity date. For interest rate ...
