From the Library and Lighthouse of Alexandria to the Great Pyramid at Giza, the Ancient Egyptians produced several wonders of the world, revolutionized architecture and construction, created some of the world's first systems of mathematics and medicine, and established language and art that spread across the known world. Egyptologists. Perhaps the most intriguing aspect of ancient Egyptian civilization was its inception from the ground up, as the ancient Egyptians had no prior civilization which they could use as a template. In fact, ancient Egypt itself became a template for the civilizations that followed. The Greeks and the Romans were so impressed with Egyptian culture that they often attributed many attributes of their own culture - usually erroneously - to the Egyptians. With that said, some minor elements of ancient Egyptian culture were, indeed, passed on to later civilizations. Egyptian statuary appears to have had an initial influence on the Greek version, and the ancient Egyptian language continued long after the pharaonic period in the form of the Coptic language. By the 4th century BCE, it

appeared as though ancient Egypt was in its final death throes. It had long ceased to be an influential kingdom in the Near East and Mediterranean regions, and it had been ruled over by a succession of foreign peoples including Libyans, Nubians, Assyrians, and Persians. But just when Egypt seemed was doomed to pass forever into obscurity, it was reinvigorated by outsiders, most notably Alexander the Great. While in the process of campaigning to destroy the Achaemenid Persian Empire and conquer the world in 331 BCE, he made a pit stop in Egypt that forever changed the course of Egyptian history. Although his understanding of ancient Egyptian chronology and religion was minimal, Alexander was intrigued by ancient pharaonic culture, knowing, as the 5th century BCE

Greek historian Herodotus once wrote, "Egypt is the gift of the Nile." As a result, Alexander endeavored to incorporate the land of the pharaohs into Hellenic Civilization. The three primary enemies of the Egyptians were the Libyans who occupied the Western Desert and its oases, the so-called Asiatics who lived in the Levant, and finally the Nubians to Egypt's south. Among the three peoples, the Nubians were the most "Egyptianized" and at times were integral to the development of Egyptian history. Truly, the Nubians were the greatest of all sub-Saharan peoples in pre-modern times and deserve to be studied in their own right, apart from ancient Egyptian history. In 1515, a Portuguese missionary explorer by the name of Father Francisco Álvares entered Ethiopia and took note in the

interior of the remnants of a civilization of obviously Christian origin, with living adherents conforming to a branch of the faith clearly founded in antiquity. Could this be the Kingdom of Prester John? Father Álvares was intrigued, but he was wary of too fanciful a construction, and he speculated more practically on the legend of King Solomon, the Queen of Sheba, and other such muses. As for the city at the center of the civilization, he called it Aquasumo. Thus, the existence of the Kingdom of Aksum came to the notice of Christian Europe after almost 1,000 years of isolation. The Ancient Kingdoms of Africa: The History and Legacy of the African Continent's Most Prominent Kingdoms in Antiquity chronicles the tumultuous rise and fall of kingdoms like Egypt, Nubia, Aksum, and more.

Chronologically a thousand years behind their major trading partners in Mesopotamia during the Middle Kingdom. It also is not what the ancient Egyptians actually recorded, so believing it means believing that modern Egyptologists know more about ancient Egypt than the ancient Egyptians themselves. Given that the ancient Egyptians lived through it, and all Egyptologists have to go on is random bits of pottery and mostly ruined buildings, this seems like an incredible stretch of the imagination, granted no more than time-traveling Hyksos, but still a stretch. The fact that Egyptologists feel they don't need to explain these anachronisms because the history of Egypt is a political timeline, not subject to science, is insulting both to the intelligence and to the integrity of anyone that bothers

Looking into the history of this preeminent ancient culture. The idea that the ancient Egyptians built docks in the middle of the desert, and then dredged out mind-boggling amounts of mud to move the Nile to the docks, is beyond ridiculous. Maybe that's how Egyptologists would do it, but the existence of the pyramids proves the ancient Egyptians just weren't that stupid. The fact that they did dredge mind-boggling amounts of mud simply proves that the Nile water-levels were dropping rapidly at the end of the Old Kingdom. The fact that Egyptologists ignore the ancient Egyptian records of the pre-Dynastic era is probably for the best, imagine the nonsense they would have made up to explain the Osireion if they had to admit it is 15,000 years old! Unfortunately, the timeline of Egypt is the cornerstone of

ancient history. As the Sumerian and later Mesopotamian civilizations were trading with the Egyptians, the Mesopotamian timeline is broken as the dates of certain Egyptians Kings are known to have lived at the same time as certain Mesopotamian Kings. This means that the bulk of the recorded history of Sumer has to be ignored by Assyriologists, as it just doesn't fit into the Egyptian timeline. As the Harappan history is then dated according to when they were trading with the Mesopotamians, and Indologists also fall subject to the inventive nonsense of Egyptologists. This means that Indologists have to accept the impossible fact that the bronze age Harappan civilization existed next to the iron age Ganges civilization for over 500 years, and never noticed they were there. The ancient world comes to life in the first volume in a two book series on the history of Egypt, spanning the first farmers to the construction of the pyramids. Famed archaeologist John Romer draws on a lifetime of research to tell one history's greatest stories; how, over more than a thousand years, a society of farmers created a rich, vivid world where one of the most astounding of all human-made landmarks, the Great Pyramid, was built. Immersing the reader in the Egypt of the past, Romer examines and challenges the long-held theories about what archaeological finds mean and what stories they tell about how

This volume presents the findings of a major international project on the application of radiocarbon dating to the Egyptian historical chronology. Researchers from the Universities of Oxford and Cranfield in the UK, along with a team from France, Austria and Israel, radiocarbon dated more than 200 Egyptian objects made from plant material from museum collections from all over the world. The results

comprise an accurate scientifically based chronology of the kings of ancient Egypt obtained by the radiocarbon analysis of short-lived plant remains. The research sheds light on one of the most important periods of Egyptian history documenting the various rulers of Egypt's Old, Middle and New Kingdoms. Despite Egypt's historical significance, in the past the dating of events has been a contentious undertaking with Egyptologists relying on various chronologies made up from archaeological and historical records. The radiocarbon dates nail down a chronology that is broadly in line with previous estimates. However, they do rule out some chronologies that have been put forward particularly in the Old Kingdom, which is shown to be older than some scholars thought. The

research has implications for the whole region because the Egyptian chronology anchors the timing of historical events in neighbouring areas tied to the reign of particular Egyptian kings. The results will allow for more historical comparisons to be made in countries like Libya and Sudan, which have conducted radiocarbon dating techniques on places of archaeological interest in the past.

The second edition of the Historical Dictionary of Ancient Egypt expands upon the information presented in the first with a chronology, an introductory essay, appendixes, a bibliography, and hundreds of cross-referenced dictionary entries on Egyptian rulers, bureaucrats, and commoners whose records have survived, as well as ancient society, religion, and gods.

This Element seeks to demonstrate how ceramics, a data set that is more typically identified with chronology than social analysis, can forward study of Egyptian society writ large. This Element argues that the sheer mass of ceramic material indicates the importance of pottery to Egyptian life. Ceramics form a crucial dataset with which Egyptology must critically engage, but which require us to also engage with statistical thinking and anthropological theory, and which necessitate working with the Egyptian past using a more fluid theoretical toolkit. This Element will demonstrate how ceramics may be employed in social analyses through a focus on four broad areas of inquiry: regionalism; ties between province and state, elite and non-elite; domestic
