The focus here is on Apache--the software that currently runs over half the web sites throughout the world--and on making Apache do exactly what is needed using the various options and "extensions" provided as part of the package (distributed by the Apache Software Foundation). Over 150 "recipes" cover broad topics such as installing the software, adding modules (e.g. perl), logging, hosting multiple sites, and handling aliases, security, dynamic content (cgi-bin), and performance. Each recipe consists of a problem, solution, and discussion, with cross-references to related recipes and web links;
