Mathews (1992) found that

high-ability students prefer cooperative learning in homogeneous ability groups than heterogeneous ability groups. This means that students who are academically more inclined prefer to form a group with

Where To Download Cooperative Learning

those who are as equal or more academically inclined rather than being grouped with a student of lower ability.

Homogeneous grouping can be defined as dividing students into small groups which include students of the same ability or level for example high achievers together and

While heterogeneous grouping can be defined as dividing students into groups that include mixed or different levels, high and low achievers together.

Heterogeneous and

Homogeneous Grouping.

Heterogeneous grouping is when a diverse group of students is put in the same cooperative learning group. This mixed group may consist of students of varying ages,

educational levels,
interests, special needs,
etc. Students are of
approximately the same age,
but function on different

If the purpose of the group learning activity is to help struggling students, the research shows that heterogeneous groups may
