Criminology is in a period of much theoretical ferment. Older theories have been revitalized, and newer theories have been set forth. The very richness of our thinking about crime, however, leads to questions about the relative merits of these competing paradigms. Accordingly, in this volume advocates

of prominent theories are asked to "take stock" of their perspectives. Their challenge is to assess the empirical status of their theory and to map out future directions for theoretical development.

Social learning theory has been called the dominant theory of crime and delinquency in the United States, yet

it is often misrepresented. This latest volume in the distinguished Advances in Criminological Theory series explores the impact of this theory. Some equate it with differential association theory. Others depict it as little more than a micro-level appendage to cultural deviance theories. There

have been earlier attempts to clarify the theory's unique features in comparison to other theories, and others have applied it to broader issues. These efforts are extended in this volume, which focuses on developing, applying, and testing the theory on a variety of criminal and delinquent behavior. It applies the

theory to treatment and prevention, moving social learning into a global context for the twenty-first century.

This comprehensive volume includes the latest work, tests, and theoretical advances in social learning theory and will be particularly helpful to criminologists, sociologists, and

psychologists. It may also be of interest to those concerned with current issues relating to delinquency, drug use/abuse, and drinking/alcohol abuse.

The social learning theory of crime

integrates Edwin H.

Sutherland's differential

association theory with behavioral learning

theory. It is a widely

accepted and applied

approaches to criminal

and deviant behavior.

However, it is also

widely misinterpreted,

misstated, and

misapplied. This is the first single volume, in-depth, authoritative discussion of the background, concepts, development, modifications, and empirical tests of social learning theory. Akers begins with a personal account of Sutherland's involvement in criminology and the origins of his influential

perspective. He then traces the intellectual history of Sutherland's theory as well as social learning theory, providing a comprehensive explanation of how each theory approaches illegal behavior. Akers reviews research on various correlates and predictors of crime and delinquency that may be

used as operational measures of differential association, reinforcement, and other social learning concepts. Akers proposes a new, integrated theory of social learning and social structure that links group differences in crime to individual conduct. He concludes with a cogent discussion

of the implications of social learning theory for criminology and public policy. Now available in paperback, with a new introduction by the author, this volume will be invaluable to professionals and for use in courses in criminology and deviance.
