*Oil Cooler Delete DIY - YouTube*

There's usually a relief valve in the oil pump. When an oil cooler is fitted it MIGHT be that the oil pump valve is blanked off. Might, not definite. That's because there's another valve in the cooler, that takes over the job. So, by blanking the cooler, then you've blanked the valve as well. It's just worth checking, I suppose.

Be careful not to strain the wiring for the camshaft sensor. Now you will be able to see the oil cooler stat through the space between the metal EGR pipe and the inlet manifold. That's the part with the hose and clip visible in the centre of the picture. Now using a long pair of pliers squeeze together and release the clip then pull off the hose. You will loose some coolant at this point.
