combines likely the
broadest scope of any
logic textbook available
with clear, concise
writing and interesting
examples and
arguments. Its key
features, all retained in
the Second Edition,
include: • simpler ways
to test arguments than

Online Library Introduction To

those available in competing textbooks, including the star test for syllogisms • a wide scope of materials, making it suitable for introductory logic courses (as the primary text) or intermediate classes (as the primary or supplementary book) • engaging and easy-to-understand examples and arguments, drawn

Online Library Introduction To

from everyday life as well as from the great philosophers • a suitability for self-study and for preparation for standardized tests, like the LSAT • a reasonable price (a third of the cost of many competitors) • exercises that correspond to the LogiCola program, which may be downloaded for free

from the web. This
Second Edition also: •
arranges chapters in a
more useful way for
students, starting with
the easiest material and
then gradually
increasing in difficulty •
provides an even
broader scope with new
chapters on the history
of logic, deviant logic,
and the philosophy of
logic • expands the

Starting Out with
Programming Logic and
Design, Third Edition, is

Online Library Introduction To

a language-independent introductory programming book that orients students to programming concepts and logic without assuming any previous programming experience. In the successful, accessible style of Tony Gaddis' best-selling texts, useful examples and detail-oriented explanations

Online Library Introduction To

allow students to become comfortable with fundamental concepts and logical thought processes used in programming without the complication of language syntax.

Students gain confidence in their program design skills to transition into more comprehensive programming courses.

Online Library Introduction To

The book is ideal for a programming logic course taught as a precursor to a language-specific introductory programming course, or for the first part of an introductory programming course.
