For each of the vaccine-preventable diseases, this manual includes a chapter describing the importance of rapid case identification; the importance of surveillance; disease reduction goals; case definitions (including clinical description and case classifications); epidemiologically important data to be collected during case investigation; activities for enhancing surveillance; activities for case investigation; and activities for outbreak control. Other chapters include information on surveillance indicators; surveillance data analyses; reporting adverse events following vaccination; and enhancing surveillance. In addition, the manual includes a section reserved for insertion of state-specific guidance for VPD surveillance and extensive appendices. This manual answers commonly asked questions regarding the surveillance and reporting of vaccine-preventable diseases and provides information on enhancing existing surveillance systems.

The field of sexual behaviour has been notoriously neglected in social research and there has been no major survey of sexual behaviour since the Kinsey report in the late 1950s. Various social and health problems, including the AIDS epidemic and the increase in teenage pregnancies have recently underlined the need for an up to date and authoritative analysis of current sexual behaviour. Sexual Attitudes and Lifestyles is the result of a major statistical survey of the sexual behaviours and attitudes of 20,000 UK citizens, collected by written questionnaires and face to face interviews. It is the most comprehensive and up to date source of information on human sexual behaviour available and the first official UK-based resource ever published.

This manual provides an authoritative guide to standard laboratory procedures for detecting and diagnosing sexually transmitted diseases. Addressed to clinical microbiologists and medical technologists, the manual is designed to serve as a practical bench aid, tuned to the needs and capacities of laboratories at different levels in the health system. Although the standard procedures described have universal relevance, particular attention is given to conditions in developing countries, where rapid transport of specimens may not be possible and cost factors may be decisive. Recommended procedures, tests, and techniques are supported by close to 150 references. Noting the constraints on staff and resources faced by most laboratories throughout the world, the manual concentrates on tests known to yield essential diagnostic information. Standard antimicrobial susceptibility tests are described for those diseases where drug resistance is a problem. Although the major emphasis is on procedures for diagnosis, case-finding, and test-of-cure, some procedures useful in epidemiological research are also included. The manual has nine chapters covering the full range of sexually transmitted diseases: gonorrhoea "Chlamydia trachomatis" infection, syphilis, genital herpes, chancroid granuloma inguinale, vaginitis in adults, human papillomavirus infection, and human immunodeficiency virus. Each chapter opens with a brief description of the disease and the principal laboratory approaches to diagnosis, followed by detailed advice on the collection and transport of specimens. Against this background, all relevant laboratory methods, from microscopy, culture and non-culture techniques to serology and the use of commercial test kits, are described in detail, with colour plates used to illustrate selected procedures and results. Apart from providing detailed step-by-step instructions for each procedure, the manual offers abundant practical advice on the selection of tests, their comparative sensitivity, and specificity, the degree of skill required, the correct interpretation of results, and common errors and how to avoid them. The chapter on HIV infection reproduces the latest joint UNAIDS and WHO recommendations for the selection and use of HIV antibody tests. Further practical guidance for each of these diseases is provided in three annexes, which summarize appropriate diagnostic tests at different levels of the laboratory system, describe the media, reagents, and stains required for the tests, and list all the basic products needed to prepare essential reagents and media.
