The Shell: You've probably heard mention of the Linux command line. This is the shell - a command process that allows you to control the computer via commands typed into a text interface. This is what, at one time, scared people away from Linux the most (assuming they had to learn a seemingly archaic command line structure to make Linux work).

The Complete Beginner's Guide to Linux - Linux.com

Obtaining Linux. Learning Linux is like riding a bike, you can only become proficient by actually doing. So before getting started, make sure you have access to a terminal. Luckily, you have several options available to you here. If you are on a Mac then you are in luck, you already have a terminal. Another option is to run Linux.

These free resources include eBooks, video courses, websites etc. And these are divided into sub-categories so that you can easily find what you are looking for when you seek to learn Linux.

25 Free Books to Learn Linux [Download PDF for Free]

One good reason for learning some command line basics is that instructions online will often favour the use of shell commands over a graphical interface. Where those instructions require changes to your machine that go beyond modifying a few files in your home directory, you'll inevitably be faced with commands that need to be run as the machine's administrator (or superuser in Unix parlance).
