The Rail Technical Strategy is a long-term vision of the railway as a system, which identifies the challenges that will have to be met over the next 30 years, which should be read alongside the 2007 White Paper 'Delivering a Sustainable Railway'. It starts by looking at the needs and requirements, including the strategic drivers and future traffic types, before examining the characteristics of a future railway system.

Amongst the key themes is the need for a more precisely engineered system that can be run to maximum capacity and improve environmental performance. The final section looks at the ways the strategy can be implemented.

The impetus for this review concerns questions about the tax arrangements of senior public sector appointees. Findings have revealed a lack of transparency around such tax arrangements, with over 2400 staff identified as off the regular payroll

engagements who are employed by central government departments and their associated bodies. About 85% are engaged for longer than six months. Although such arrangements maybe appropriate, it is not absolutely clear to the employer whether a particular individual is paying the right amount of tax and National Insurance in relation to their role. To ensure future tax transparency in this regard, the review has set out a three pronged approach: (i) The most senior staff to be on the payroll; (ii) Employers to ensure that they have the right to seek assurance about the tax arrangements of long-

needs of expanding metropolitan populations and support future economic and urban development. When appropriately planned and properly implemented as part of a larger public transportation network, urban rail systems can provide rapid mobility and vital access to city centers from surrounding districts. High-performing urban rail services, when carefully approached as development projects, can help enhance quality of life by giving citizens access to employment opportunities, essential services, urban amenities, and neighboring communities. The purpose of this Handbook is to synthesize

challenges faced by decision makers considering urban rail projects. It brings together the expertise of World Bank staff and the input of numerous specialists to synthesize international 'good practices' and recommendations that are independent of commercial, financial political, or other interests. The material presented is intended as an honest-broker guide to maximize the impact and manage the challenges of urban rail systems in cities in both developed and developing countries. Rather than identify a single approach, this Handbook acknowledges the complexities and context necessary when

largely restricted to specialist journal publications and technical reports. Rail Human Factors addresses this imbalance by providing the first fully comprehensive overview of the area. The volume includes contributions from leading ergonomists, psychologists, sociologists, management scientists and engineers whose common theme is to investigate, understand and design for people on the railways, including staff, passengers and the general public. Every area of ergonomics/human factors is covered: physical design of work and equipment in maintenance; cognitive ergonomics in driving,
