The Cell Cycle

The cell cycle consists of interphase and the mitotic phase. During interphase, the cell grows and the nuclear DNA is duplicated. Interphase is followed by the mitotic phase.

Get Free Section 1 The Cell Cycle Study Guide A

During the mitotic phase, the duplicated chromosomes are segregated and distributed into daughter nuclei.

eukaryotes, the cell cycle consists of a long preparatory period, called interphase, during which chromosomes are replicated.

The Cell Cycle | Biology 171

The cell cycle is a four-stage process in which the cell increases in size (

Get Free Section 1 The Cell Cycle Study Guide A

gap 1, or G1, stage), copies its DNA (synthesis, or S, stage), prepares to divide (gap 2, or G2, stage), and divides (mitosis, or M, stage). The stages G1, S, and G2 make up interphase, which accounts for the span between cell divisions.
