Silicon Photonics: An Introduction: Reed, Graham T. ...

Silicon photonics is the study and application of photonic systems which use silicon as an optical medium. The silicon is usually patterned with sub-micrometre precision, into microphotonic components. These operate in the infrared, most commonly at the 1.55 micrometre wavelength used by most fiber optic telecommunication systems.

Silicon photonics - Wikipedia

Abstract Silicon photonics is a vibrant technology area in which photonic integrated circuits and components are made of silicon. The main driving force behind its development is the prospect of low-cost manufacture. This is possible due to its compatibility with CMOS processing techniques, which lead to high volumes and high yield.
