Cloud computing is the latest market-oriented computing paradigm which brings software design and development into a new era characterized by “XaaS”, i.e. everything as a service. Cloud workflows, as typical software applications in the cloud, are composed of a set of partially ordered cloud software services to achieve specific goals.

Workflow design happens when you map out the sequential tasks involved to take an item from 'initiated' to 'processed'. In the process of workflow design, you get a chance to see the entire process and how data moves seamlessly from step to step. Each task in the workflow should be assigned to either a single human, group of humans, or to a system.
