Public health officials state that vaccines are safe and effective, but the truth is far more complicated. Vaccination is a serious medical intervention that always carries the potential to injure and cause death as well as to prevent disease. Coercive vaccination policies deprive people of free and informed consent—the hallmark of ethical medicine. Americans are increasingly concerned about vaccine safety and the right to make individual, informed choices together with their healthcare practitioners. Vaccine Epidemic focuses on the searing debate surrounding individual and parental vaccination choice in the United States. Habakus, Holland, and Rosenberg edit and introduce a diverse array of interrelated topics concerning the explosive vaccine controversy, including the ethics of vaccination mandates, corrupting conflicts of interest in the national vaccine program, and personal narratives of parents, children, and soldiers who have suffered vaccine injury. Newly updated with additional chapters focusing on institutional scientific misconduct, mandates for healthcare workers, concerns about HPV vaccine development, and the story behind the Supreme Court’s recent vaccine decision, Vaccine Epidemic remains the essential handbook for the vaccination choice movement and required reading for all people contemplating vaccination for themselves and their children.

Argues that vaccines are dangerous and that government mandates violate individual rights, shares stories of people injured by vaccinations, and suggests ways to reform the current American health-care system.

A Groundbreaking Guide to the HPV Vaccine and the Science, Safety, and Business Behind It Cancer strikes fear in people’s hearts around globe. So the appearance of a vaccine to prevent cancer—as we are assured the human papillomavirus (HPV) vaccine will—seemed like a game-changer. Since 2006, over eighty countries have approved the vaccine, with glowing endorsements from the world’s foremost medical authorities. Bringing in over \$2.5 billion in annual sales, the HPV vaccine is a pharmaceutical juggernaut. Yet scandal now engulfs it worldwide. The HPV Vaccine on Trial is a shocking tale, chronicling the global efforts to sell and compel this alleged miracle. The book opens with the vaccine’s invention, winds through its regulatory labyrinths, details the crushing denial and dismissal of reported harms and deaths, and uncovers the enormous profits pharma and inventors have reaped. Authors Holland, Mack Rosenberg, and Iorio drill down into the clinical trial data, government approvals, advertising, and personal accounts of egregious injuries that have followed in countries as far-flung as Japan, Australia, Colombia, India, Ireland, the U.K. and Denmark. The authors have written an unprecedented exposé about this vaunted vaccine. Written in plain language, the book is for everyone concerned - parents, patients, doctors, nurses, scientists, healthcare organizations, government officials, and schools. Ultimately, this book is not just about the HPV vaccine, but about how industry, government, and medical authorities may be putting the world’s children in harm’s way.

"In an epic investigation spread across fifteen years, Deer battles medical secrecy and insider cover-ups, smear campaigns and gagging lawsuits, to uncover rigged research and moneymaking schemes, the heartbreaking plight of families struggling with disability, and the scientific scandal of our time.

"A presentation of the scientific argument in favor of vaccination, which probes the consequences, origins and impact of the the anti-vaccination movement"--

Over the past 50 years, rates of chronic illness, learning disabilities, and allergies in children have exploded--1 in 6 children has a diagnosed learning disorder, 1 in 50 has autism, and 1 in 13 has severe food allergies. Instead of blaming genetics or increased awareness and diagnosis, author Thomas Cowan, MD, attributes these rising numbers to our current vaccination policy. In Vaccines, Auto-Immunity, and the Assault on Childhood, Cowan combines his years of experience as a medical practitioner with his research into the history and science of vaccines to show how childhood illnesses, which help children to develop a robust immune system, are now eschewed by conventional medicine in favor of an increasing array of vaccinations that do more harm than good. Invoking philosopher Rudolph Steiner's vision of vaccines as inspired by "spirits of darkness," Cowan brings to light the various ways in which scientists and government officials work to promote a vaccine program that only increases suffering. Along the way he questions commonly held views of cell biology, the role of water in the body, and the spatial and spiritual components of autism. Additionally, he provides hope of recovery in the form of a nontoxic course of treatment for those suffering chronic inflammation and other adverse immune responses to vaccines. Cowan's thoughtfully bold writing takes us on a journey into the history of illness, questioning the true origins of diseases such as polio, and asking important questions, such as: why did paralytic polio make a sudden appearance in the US in the years between 1916-1918? The answers lie far beyond what conventional medicine would have us believe. Vaccines, Auto-Immunity, and the Assault on Childhood asks that we re-examine not only our modern health system but our relationship with the spiritual world. Only then will we find true health.

An accessible and reassuring guide to childhood health and immunity from a pediatrician who’s both knowledgeable about the latest scientific research and respectful of a family’s risk factors, health history, and concerns In The Vaccine-Friendly Plan, Paul Thomas, M.D., presents his proven approach to building immunity: a new protocol that limits a child’s exposure to aluminum, mercury, and other neurotoxins while building overall good health. Based on the results from his pediatric practice of more than eleven thousand children, as well as data from other credible and scientifically minded medical doctors, Dr. Paul’s vaccine-friendly protocol gives readers • recommendations for a healthy pregnancy and childbirth • vital information about what to expect at every well child visit from birth through adolescence • a slower, evidence-based vaccine schedule that calls for only one aluminum-containing shot at a time • important questions to ask about your child’s first few weeks, first years, and beyond • advice about how to talk to health care providers when you have concerns • the risks associated with opting out of vaccinations • a practical approach to common illnesses throughout the school years • simple tips and tricks for healthy eating and toxin-free living at any age The Vaccine-Friendly Plan presents a new standard for pediatric care, giving parents peace of mind in raising happy, healthy children. Praise for The Vaccine-Friendly Plan “Finally, a book about vaccines that respects parents! If you choose only one book to read on the topic, read The Vaccine-Friendly Plan. This impeccably researched, well-balanced book puts you in the driver’s seat and empowers you to make conscientious vaccine decisions for your family.”--Peggy O’Mara, editor and publisher, Mothering Magazine “Sure to appeal to readers of all kinds as a friendly, no-nonsense book that cuts through the rhetoric surrounding vaccines. It offers validation to those who avoid some or all, while offering those who do want to vaccinate help on how to do so safely. This is a great book for anyone with children in their lives.”--Natural Mother “A valuable, science-supported guide to optimizing your child’s health while you navigate through complex choices in a toxic, challenging world.”--Martha Herbert, M.D., Ph.D., Harvard Medical School “An impressively researched guide, this important book is essential reading for parents. With clear and practical advice for shielding children from harmful toxins, it will compel us all to think differently about how to protect health.”--Jay Gordon, M.D., FAAP “Rather than a one-size-fits-all vaccine strategy, the authors suggest thoughtful, individualized decisions based on research and collaboration between parents and clinicians—a plan to optimize a child’s immune system and minimize any risks.”--Elizabeth Mumper, M.D., founder and CEO, The Rimland Center for Integrative Pediatrics “This well-written and thought-provoking book will encourage parents to think through decisions—such as food choices and the timing of vaccines—that affect the well-being of their children. In a world where children’s immune systems are increasingly challenged, this is a timely addition to the literature.”--Harriet Lerner, Ph.D., bestselling author of The Dance of Anger and The Mother Dance

Award-winning journalist and New York Times bestselling author Gerald Posner reveals the heroes and villains of the trillion-dollar-a-year pharmaceutical industry and delivers “a withering and encyclopedic indictment of a drug industry that often seems to prioritize profits over patients (The New York Times Book Review). Pharmaceutical breakthroughs such as antibiotics and vaccines rank among some of the greatest advancements in human history. Yet exorbitant prices for life-saving drugs, safety recalls affecting tens of millions of Americans, and soaring rates of addiction and overdose on prescription opioids have caused many to lose faith in drug companies. Now, Americans are demanding a national reckoning with a monolithic industry. “Gerald’s dogged reporting, sets Pharma apart from all books on this subject” (The Washington Standard) as we are introduced to brilliant scientists, incorruptible government regulators, and brave whistleblowers facing off against company executives often blinded by greed. A business that profits from treating ill can create far deadlier problems than it cures. Addictive products are part of the industry’s DNA, from the days when corner drugstores sold morphine, heroin, and cocaine, to the past two decades of dangerously overprescribed opioids. Pharma also uncovers the real story of the Sacklers, the family that became one of America’s wealthiest from the success of OxyContin, their blockbuster narcotic painkiller at the center of the opioid crisis. Relying on thousands of pages of government and corporate archives, dozens of hours of interviews with insiders, and previously classified FBI files, Posner exposes the secrets of the Sacklers’ rise to power—revelations that have long been buried under a byzantine web of interlocking companies with ever-changing names and hidden owners. The unexpected twists and turns of the Sackler family saga are told against the startling chronicle of a powerful industry that sits at the intersection of public health and profits. “Explosively, even additively, readable” (Booklist, starred review), Pharma reveals how and why American drug companies have put earnings ahead of patients.

Reveals the truth behind the controversial issue of vaccine-related injuries. Proponents declare that vaccines have saved millions of lives. Critics claim that the success is overstated and that vaccines may even be dangerous. Many consider mandatory vaccinations a violation of individual rights or religious principles. Many in public health argue that vaccine mandates are critical and justified and that antivaccination sentiment has resulted in outbreaks of preventable childhood illnesses. Vaccine critics point to mainstream medicine’s denial of and underreporting of vaccine injury. Vaccine injuries have happened in the past and continue to happen today, and neither the mainstream medical establishment nor the government has ever fully and transparently addressed the issue of vaccine injury. In the 1980s, the United States addressed individual cases of vaccine injury by establishing the NVICP—the National Vaccine Injury Compensation Program—a controversial Department of Health and Human Services program. The NVICP was intended to be “non-adversarial, compassionate, and generous” to vaccine-injury victims. However, many vaccine-injury victims and safety advocates believe that the program is not functioning as intended. There are also concerns that the program is keeping the reality of vaccine injury from public inspection. Vaccine Injuries, a groundbreaking book in the field, reveals cases of vaccine injury from the NVICP—something that has never been offered to the public—and lets readers assess vaccine injuries for themselves.

The Environmental and Genetic Causes of Autism delves deep into the full body of past and current research to reveal how genetic predispositions and environmental factors can combine to produce the conditions autism and autism spectrum disorders (ASD). To make this groundbreaking volume, Dr. James Lyons-Weiler combed through the past fifty years of published research on autism, exploring subjects such as genetic variation, mechanisms of neurotoxicity of metals and pesticides, and the central and combined roles of each in causing autism. Lyons-Weiler provides a major overview of all aspects of the condition of autism, reviews changes in diagnoses and treatments, and explains how genetic information can be used to tailor effective treatments, and sometimes reversals, of the symptoms. He also presents practical forward-looking suggestions on how to design future studies to facilitate the discovery of biomarkers for autism risk and how to classify the full range of autism spectrum disorders. Autism is considered one of the most mystifying conditions of our day, and alarmed scientists, doctors, politicians, and parents are desperately trying to understand why the condition is escalating. According to the CDC, rates in the United States have risen from an estimated one in two thousand children in 1980, to one in sixty-eight in 2012, and a new National Health Interview Survey shows a rate of one in forty-five. By the time you read this book, that number may have changed yet again. While most autism researchers focus on either environmental or genetic causes of autism, Lyons-Weiler’s opus demonstrates that to fully understand the condition and to finally put its rate on the decrease, it is essential to pay attention to the science showing how the two classes of factors interact.
