Virus that infects bacteria L. Process in which a bacterium replicates its DNA and divides in half Complete each statement by writing the correct word or words.

Online Library Virus And Bacteria Worksheet Answer Key

20.3 Diseases Caused by Bacteria and Viruses

Virus vs bacteria: Any difference in symptoms? Symptoms usually reflect the area of the body infected, and the infecting organism. For example, a bacterial infection of the skin may cause a discharge, swelling, pain and redness in a certain area, whereas a viral infection, such as hepatitis C may cause abdominal pain, joint pain, nausea or vomiting, and yellowing of the skin or eyes.

What's the difference between Bacteria and Viruses?

Viruses are not living organisms, bacteria are. Viruses only grow and reproduce inside of the host

Online Library Virus And Bacteria Worksheet Answer Key

cells they infect. When found outside of these living cells, viruses are dormant. Their “life” therefore requires the hijacking of the biochemical activities of a living cell. Bacteria, on the other hand, are living organisms that consist of single cell that can generate energy, make its own food, move, and reproduce (typically by binary fission). This allows bacteria to live in many places ...
